

SERFAUS-FISS-LADIS

CLIENT BACKGROUND

Serfaus-Fiss-Ladis is one of the few Alpine tourism destinations which have succeeded in transferring the success story of the winter to the summer season. While many of the famous winter sports destinations are empty in summer as most hotels are closed and cable cars are not running, there is a lot going on in Serfaus-Fiss-Ladis.

The tourism destination Serfaus-Fiss-Ladis consists of three villages: Serfaus, Fiss and Ladis. Nearly one third of all **2.2 million overnight stays** of the village of Serfaus are generated during the summer season. With 14,112 tourist beds in winter and 12,954 in summer the community is one of the most tourism intensive ones of the Austrian province of Tyrol. Serfaus with 963 overnights per inhabitant is much more tourism intense than comparable famous Tyrolean ski resorts like Ischgl or Sölden.

SUCCESSFUL TOURISM DESTINATION BY DESIGN

The success story of this destination is based on pioneering achievement and entrepreneurial personalities as well as the willingness of all stakeholders to cooperate within the destination. **The resort is one of the rare examples where the tourism association, the cable cars, the community, hotels, gastronomy, ski schools and ski rentals have been working closely together.** For several years the tourism association and the cable cars have been operated under the same brand.

After all the guest himself does not care who is responsible for the touristic product as long as it works well. And the product does work.

DESIGNING THE WHOLE CUSTOMER JOURNEY

Serfaus-Fiss-Ladis has successfully positioned itself as the leading family destination of the Tyrol and therefore tries to perfectly design the whole customer journey.

This starts with the first customer contact and further reaches from booking, information gathering before the journey to accessing the destination, the stay itself as well as the homeward journey and the follow-up phase. In order to better understand the customers' desires, needs, but also problems and irritations, Serfaus-Fiss-Ladis uses various quantitative and qualita-

FACTS

Project duration	June – September 2015
Incentive	1 week family holiday in Serfaus during summer 2016
Number of registered participants	> 300
Number of participants who have added more than 3 touchpoints	44
Total number of touchpoints	370

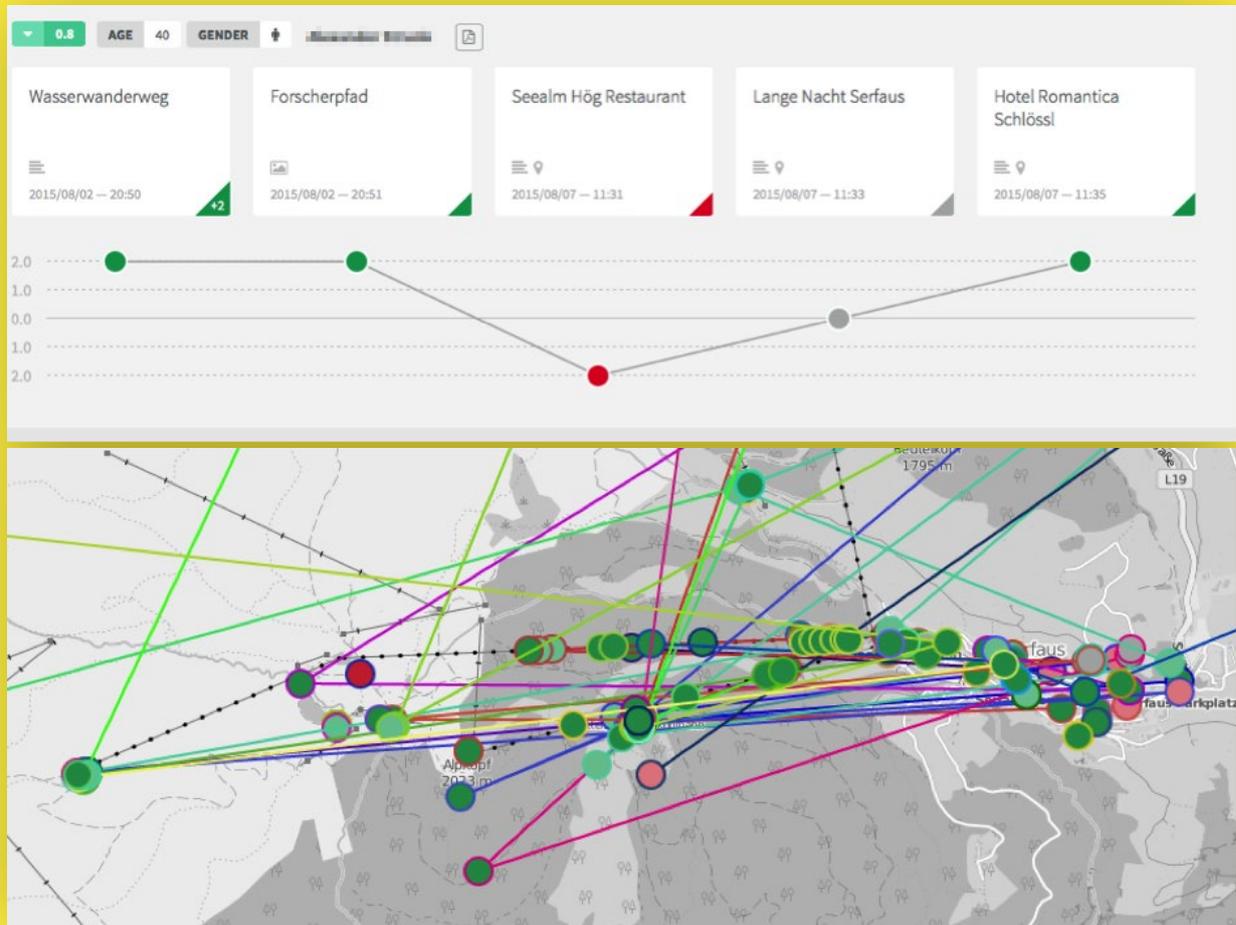

tive tools for quality management. During the summer of 2015 the destination has also launched the pilot project “**Mobile Quality Check**” together with ExperienceFellow.

While classic market research tools are based on standardized question categories, this “Mobile Quality Check” for the first time offers customers a **mobile evaluation tool** where customers themselves can decide what, when, where and how he wants to evaluate. Therefore, customers use a dedicated app on their own smartphone as an evaluation tool. Customers can define critical moments and evaluate these on a five-point scale as well as document them in detail with photos, videos or text.

CONDUCTING A MOBILE ETHNOGRAPHY PROJECT

In order to spread the word about the project among guests, the destination has placed postings in all gondolas, at cable-car stations and various attractions as well as table displays in mountain restaurants.

These briefly explain the project and provide information for the access process. Guests can use free WIFI in cable car stations and restaurants in order to download the **white-labelled ExperienceFellow app**, log into the project and start collect-

ing data straight away while they are waiting for the cable car or for their meal. Furthermore information on the project has been provided on the website of the tourism association and the local television program.

In order to motivate guests to actively participate in the project, the destination decided to raffle a summer holiday for one week (including accommodation with half board) for a whole family in the upcoming season of 2016 in Serfaus-Fiss-Ladis.

“The cable cars in Serfaus-Fiss-Ladis decided to use this new methodology of mobile ethnography because it offers them the advantage to generate more in-depth qualitative data at lower cost.”

— **Christof Schalber**

Project manager at cable car Komperdell in Serfaus

USING REAL-TIME TECHNOLOGY

The web-based software allows cable car managers to track data in real-time and thus to react to customer problems straight away. Christof Schalber adds: “In Serfaus-Fiss-Ladis we use ExperienceFellow mainly to track customer feedback instantaneously **in order to detect gaps in the service chain** of the destination”.

A **time and location stamp** is automatically assigned to every touchpoint so that data can be visualized on a map. By tagging data, touchpoints can be analyzed through various filters. This filtering process allows Mr. Schalber to detect negative touchpoints on a daily basis and react to them immediately.

While some customer problems can easily be solved like an overloaded hiking bus at peak hours, others are put on a list of mid- and long-term projects. By this Serfaus-Fiss-Ladis shows how important customer feedback is to them and how **customers can actively contribute** to improve the touristic product.

CUSTOMER EXPERIENCE AND EMPLOYEE EXPERIENCE

But not only customers can be included into the service production process. Serfaus-Fiss-Ladis also uses the ExperienceFellow app for **means of employer branding**. Staff members can apply the app to detect problems in the service production or create new ideas for improvement and innovation.

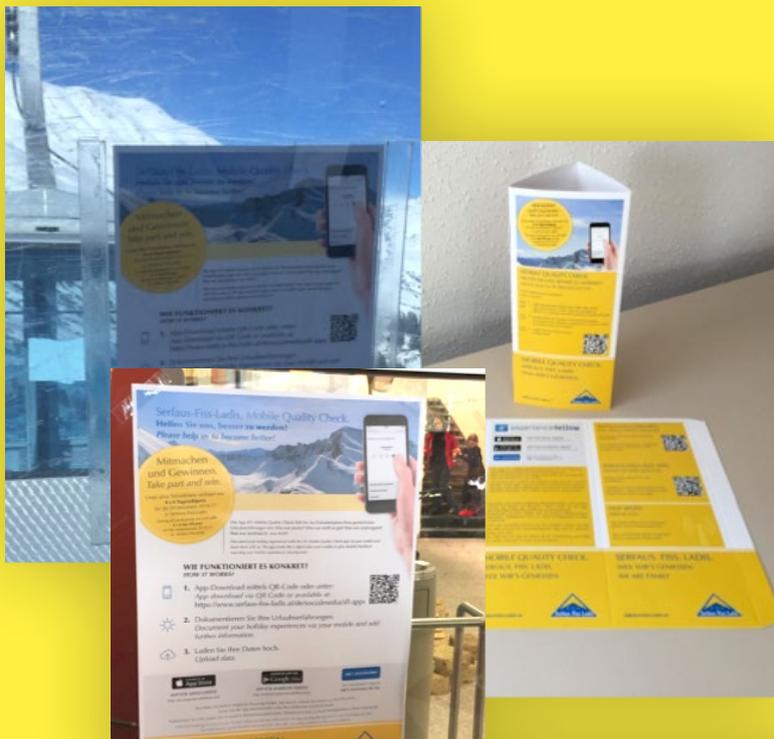

The employee's suggestions are analyzed on a monthly basis. This does not only improve quality but also enhance staff motivation.

LEARNINGS AND INSIGHTS ALONG THE WAY

After the pilot phase during the 2015 summer season, the project team in Serfaus-Fiss-Ladis was able to better understand the functionality of the ExperienceFellow app, learned how to successfully implement a project and to analyze the data. But the team of ExperienceFellow as well had the chance to improve its offer by working together with the destination.

Based on the pilot project, "Mobile Quality Check" will be continued through the 2015/16 winter season.

"To realize a project with one of the leading tourism destinations of the Alps has been an exciting challenge for us. During the upcoming winter season the cable cars in Serfaus-Fiss-Ladis will use the first white-label solution of ExperienceFellow. It will be interesting for us to see how guests use the white-labelled version of our app", says Klaus Schwarzenberger, CTO of ExperienceFellow.

Serfaus-Fiss-Ladis Mobile Quality Check

Document your holiday experiences with the SFL Mobile Quality Check app via your mobile device. The app enables to give detailed feedback regarding holiday experiences. Like a digital diary, customers can add touchpoints (moments of direct or indirect contact with a certain service, infrastructure, etc.), name these, evaluate them, and document them with text, photo, video, or audio notes.

We would be pleased if you share your experiences in Serfaus – Fiss – Ladis with us.
